Criteria	Ratings				Pts
Problem Formulation Description of the input and desired output. (Given A, find B.)	**2 pts** **Full Marks**		**1 pts** **Unclear**	**0 pts** **No Marks**	2 pts
Motivation. Who posed the problem and why? Are there any applications?	**2 pts** **Full Marks**			**0 pts** **No Marks**	2 pts
History Discuss possible brute force solutions or other early algorithms. What are the challenges in designing efficient algorithms for the problem? What is the current best algorithm for solving the problem? What are the key ideas that make the best algorithm possible?	**2 pts** **Full Marks**		**1 pts** **Unclear** Some crutial technical details are unexplained or unclear.	**0 pts** **No Marks**	2 pts
One Algorithm Elaborate on one particular algorithm of your choice in more detail. (1) Explain the main strategy of the algorithm in plain words. (2) Include pseudo-code or code snippets for the most interesting part. (3) Analyze the running time of the algorithm.	**8 pts** **Full Marks**	**6 pts** **Missing details** Some details are missing, and the algorithm is unclear.	**4 pts** **Unclear** The algorithm or some of the key technical details are incomplete, incomprehensible, or unexplained.	**0 pts** **No Marks**	8 pts
Implementation Find and test open source code for the algorithm (or create code if unavailable). Give recommendations for other who would like to use the code.	**2 pts** **Full Marks**		**1 pts** **Incomplete** Not enough information about existing implementations of the algorithm	**0 pts** **No Marks**	2 pts
Presentation Each presentation should include a clear statement of the problem and a detailed discussion of one algorithm. Prepare a slide show. Make sure that it is self-contained and clear.	**4 pts** **Full Marks**			**0 pts** **No Marks**	4 pts
